

Understanding Axes

What are the major nodes that need focus while solving for AEO :

- AEO Observability
- Content-pillars to focus upon
- Content-ops
- Distribution
- SEO → AEO (leveraging SEO)
- Site & navigation structure

Details below on what these mean and how should we should approach them.

AEO Observability :

How to understand success? *(It's not like traditional SEO - impressions, positions, clicks)*

AI visibility has 3 layers to it :

- Topics** → What concepts/questions does AI associate your brand with
- Sources** → Which “**external domains**” AI trusts for those concepts
- Pages** → Which exact URLs AI pulls from to construct answers

All are related, but think of it like a funnel. Not linear but rough :

More topics (association of brand to topic) → More sources (networks/other domains covering the association) → More pages getting extracted/cited from (Actually picking reference from URLs - being sources for answers for asked questions)

**Detailed KPIs are mentioned in a separate [section](#)*

Layers	sub-layers	What does it mean	Strategy	Examples	Focus for Q1'26
Topics	Performing topics	These are topics/questions where AI-generated answers already include brand (Quizizz / Wayground) - AI relates	Defend & Deepen - optimize for answer completeness (topic ++)	- Online Quiz and Trivia Platforms - Online Educational Game Alternatives - Mastery Peak Community	
Topics	Topic opportunities	AI is answering these questions, but brand is not part of the answer set	1. Internal positioning - what we offer (assessments, generators, etc) 2. External demand backwards AEO Opportunity Score = AI Volume × Intent relevance × Brand fit ^^for prioritization : - Create topic-native pages, not blog posts - What, how the teacher uses it, tools (WG mention	- Online Educational Assessment Platforms -	Yes

			here)		
Sources	Cited sources	AI isn't just citing WG/Quizizz, it's citing other domains that mention or contextualize you (has preference) : <i>Wiki</i> , <i>Reddit</i> , <i>Youtube</i>	Off-site AEO - distribution/backlinks for more network visibility - Strategy - PENDING	- Quizizz mentioned on YouTube explainer videos - Quizizz referenced in TPT descriptions - Quizizz discussed in reddit thread for the best formative tools	
Sources	Source Opportunities	Domains AI already trusts, but WG is missing from them	Piggybanking : - compatibility and comparison with already winning brands	- Online Educational and Gaming Platforms (blooket is referenced); blooket + WG → a mixture of engagement and rigour OR blooket vs WG → why fun with rigour is important	Yes
Pages	Cited pages	Exact URLs AI uses when generating answers	Output mostly (based on above inputs) *SERP → AEO optimization investment can win this	prompt: online quiz creator (https://wayground.com/home/quiz-maker)	Yes

Content-pillars to focus upon :

Which themes to create/ optimize content around

a. External demand backwards :

- i. What are the current trends and what WG's perspective?
- ii. How: user calls, social listening, SEMrush
 1. "Topic Opportunities" sections: AI is answering these questions — but your brand is not part of the answer set → Create **topic-native pages**
 2. "Source Opportunities" sections: Domains AI already trusts, but your brand is missing from them → need associations; comparison and compatibility pages (WG+Blooket for instructions) (WG vs Blooket for better learning outcome); piggybanking

b. Internal positioning/ offerings :

- i. What we have to offer and where it fits in the educational/ user-learning lifecycle → Create **topic-native pages**
- ii. How - interviews with product (Ravi), PMM (Amber) and co. to understand how product offerings need to be packaged. E.g.
 1. How to do formative assessments. Different types and WG perspective - as close to summative types – how each feature aids towards it (question types, modes, etc) and each of these feature pages with MVP experience

Content ops :

What are guardrails/ frameworks in content generated for AEO, optimized for retrieval :

e.g. [LLM evaluator](#) (covers below)

a. $Q \rightarrow A \rightarrow \text{Proof} \rightarrow \text{Expansion}$ (QAPE) :

- i. Explicit Question
- ii. Direct Answer (1–3 sentences)
- iii. Proof / Authority
- iv. Expandable depth

How - Evaluate contents; LLM based on the above. (score between 0-10); needs iteration

b. Intent $\times$ Depth Matrix (decision-making help); AEO is not just informational

- i. Recommendations (actions), ranking
- ii. Tabular representations of pros and cons
- iii. Guided decisions

How - Evaluate contents; LLM based on the above. (score between 0-10); needs iteration

c. Entity–Attribute–Relationship (EAR) --> breaking down primary questions into sub-questions to answer them (assume sub-questions as attributes)

- i. This and the intent-depth matrix are related
- ii. Defining attribute(s) of any primary question
- iii. Attributes and how to think about them (sub-queries and answers)

How - Identifying attributes via LLM and comparing them to those written in the article. Creating an overlap score to understand coverage.

d. Extractability score :

- i. Short paragraphs (2–3 lines)
- ii. Bulleted lists
- iii. Headings phrased as questions
- iv. Tables > walls of text

How - LLM-based score

e. Trust and Confidence signal

- i. First-hand language (“we tested”, “based on X users”)
- ii. Data references (even approximate ranges)
- iii. Clear ownership (About page, **authorship**)
- iv. Consistent terminology

How - LLM-based score (presence of numbers, social proof, authorship (range of authorship score))

Distribution :

How to amplify? (For AI engines to trust, prioritize and refer the generated content)

a. **Product**

- i. Structured Content for AI Optimization: Implement structured data markup (e.g., FAQ schema, How-to schema, courses & tutorials) on content pages to help search and AI engines understand and extract information directly from our website.
- b. **Cross-Platform Collaboration with High-Authority and Trusted Platforms**
 - i. Educational Content Aggregators: Platforms like Edutopia, EdSurge, TPT are highly visible for educational queries - listing content here or partnering
 - ii. Well-Indexed Educational Blogs & Forums: Submitting content to authoritative blogs (like EdTech Review and EdTech Magazine)
 - iii. Wikipedia: Create and optimize Wayground's Wikipedia page. Include structured data such as lists of services and product offerings. Link to other high-quality sources that mention Wayground (like case studies, industry reports, or educational forums).
- c. **Popular Educational Networks and Forums:** AI engines often refer to discussions and expert reviews that occur within trusted educational forums and networks. It places a lot of weight on backlinks and referrals from high-authority sources
 - i. **Reddit** (r/teachers, r/edtech): Engage with communities and share helpful links to the content where educators ask questions related to lesson planning/classroom tools
 - ii. **Quora:** Answer educational queries, linking back to relevant Wayground resources
 - iii. **Teacher Facebook Groups**
 - iv. **Medium:** Regularly publish on Medium articles about trends in edtech, AI in education, and classroom management using Wayground.
 - v. YouTube
- d. **Social Media (Twitter, Facebook, LinkedIn):** AI engines often use social signals and community engagement to gauge content credibility
 - i. Regularly post educational content
 - ii. Engage with teachers and community
- e. **Guest Posts & Thought Leadership (Not Direct Content Distribution - Brand Authority):** To help build brand authority, positioning Wayground as a trusted voice in the edtech space
 - i. Partner with renowned educational platforms, journals, and blogs (e.g., EdTech News, EdSurge, TeachThought) to write **guest articles** that link back to Wayground.
 - ii. These articles should showcase Wayground's impact on education and include links to your platform, increasing both visibility and credibility in AI engines.
- f. **Social Proof and Community Engagement (Not Direct Content Distribution - Social Validation & Trust Signals):**

- i. Case Studies, Testimonials, and Blog Posts: Encourage educators and school districts to write case studies, blog posts, or testimonials about how they've used Wayground in their classrooms and publish on their platforms and on high-traffic educational blogs
- ii. Influencer and Brand Collaborations: Collaborating with well-known educators or edtech influencers to boost brand's credibility in the eyes of AI engines

SEO → AEO :

What are we already ranking (SEO) for? doing well in SERP

- Resource/ resource library pages :
 - quiz/assessment++ keywords → long tail ADPs
 - grade 5 math integers quiz → ["https://wayground.com/admin/quiz/5f5f3f68b917cd001bdb557d/integers-grade-5"](https://wayground.com/admin/quiz/5f5f3f68b917cd001bdb557d/integers-grade-5)
 - algebra grade 8 worksheets → <https://wayground.com/en/algebra-worksheets-class-8>
- **How** to make this AEO optimized : For every resource led (mid-tail mostly ; but can be used in long tail too) topic, real intents are :
 - **Understanding** → "What is this topic?"
 - **Teaching** → "How do I explain this?"
 - **Practicing** → "Give me problems"
 - **Assessing** → "What mistakes do students make?"
 - How to use → wayground recommendation here
- Primary answer node (topic backwards) - *step 1*
- Sub-topic covered or skills covered - *step 2*
- How students learn this (mostly learning skills) - *step 3*
- Where does resource fits in (either in practice or in assessment) - *step 4*

^^this can act as building blocks for topics AEO

Site structure & navigation:

Why important :

Do check "[Top AEO player](#)" - and how they do it?

- Humans understand text, context, etc. Bots understand structure (informational, site-structure, and site-navigation)
- Site structure is how an answer engine decides:
 - What you know (WG association)
 - How confident you are (WG is)
 - Which page is safe to cite (WG URL)

What's reconstructing a knowledge graph:

- Nodes → Pages
- Edges → Navigation, internal links, breadcrumbs
- Weight → Repetition, prominence, hierarchy

Answer Confidence

= Coverage × **Structure** × **Clarity**

^^these are multipliers (more content → more coverage; but without right structure, can solve bits and pieces)

A-Level: Proposed primary navigation

Level	URL Root	Comments	Focus for Q1
Learn → navigating into content/topic pillars	/learn/	Content Creators / AI Bots/ Content Pillars	Yes
Plans	/pricing/	Management / Decision Makers	No
For Educators	/platform/ OR /admin	Product / End-Users	No, might need more infra-level changes
Library	/resource-library/	Teachers (Worksheets/UGC). All programmatic SEO pages should be linked here	Yes
Marketing landing pages	/home/landing-pages OR /hubs	Having here not having a better placeholder (marketing campaigns/ traffic to these in distribution channels) These can evolve into hubs	No

Choosing the right "root" for evergreen content is the most critical decision for the site's long-term authority. Below are the pros and cons of each primary URL structure considered.

The Educational Model ([/learn/](#))

- **Verdict:** Teacher's Choice (Preferring)
- **Pros:** * **Brand Resonance:** Aligns with the "Classroom" mental model. Users feel they are entering a space for knowledge and guides.
 - **Semantic Clarity:** AI easily identifies this as educational definitions and documentation.
- **Cons:** * **Limitation:** It implies a reading-heavy experience. If Wayground adds many interactive generators or dashboards under this root, the "Learn" label may feel inconsistent.
- Should be careful not to clutter this level with product, user experiences (should be content-heavy)

The Hub Model ([/hubs/](#)) * not preferring

- **Verdict:** Architect's Choice
- **Pros:**
 - * **Strategic Signal:** Tells search engines and AI that this is a "Central Node" for a cluster of related concepts.
 - **Scalability:** Allows the site to grow into non-reading content (videos, interactive tools) without breaking the mental model.
 - **AEO Synergy:** Perfect for "spoke-and-wheel" linking, helping AI engines map the relationship between topics.
- **Cons:**
 - * **Tone:** Can feel slightly more technical or "corporate" than "Learn."
- Our marketing pages over time can evolve into this (Will make learn interlink from these)

Other choices (not considered in annexure)

B-Level: Pillar Pages (The "Spokes")

Under the [/learn/](#) root, content should be grouped into specific clusters:

1. **Assessments Hub:** [/learn/assessments/](#)
2. **Instructional Strategy:** [/learn/instruction-strategy/](#)
3. **AI Literacy:** [/learn/ai-literacy/](#)
4. **Career-Technical Ed:** [/learn/career-technical-education/](#)

Technicalities to be handled :

1. **Depth:** No pillar page or article should be more than 3 folders deep (e.g., [wayground.com/learn/topic/article](#)).
2. **Access:** The **Assessments Hub** must be pinned in the site footer or the main "Resources" dropdown to ensure it is always accessible to crawlers.
3. **Interlinking:** Product pages ([/platform/](#)) should link to Hubs ([/learn/](#)) to provide educational context to features. How ?
 - a.
 - The Concept (Hub): [abc.com/learn/assessments/formative](#)
 - Must Link to: **The Tool** ([/product/assessment-builder](#)) and **The Material** ([/resources/formative-worksheet](#)).
 - Anchor Text: **"Build your own"** or **"Download practice example."**
 - b.
 - The Material (Resources): [abc.com/resources/algebra-formative-worksheet](#)
 - Must Link to: **The Concept** ([/learn/assessments/formative](#)).
 - Anchor Text: **"Learn why this works."**
 - c.
 - The Tool (Product): [abc.com/product/assessment-builder](#)
 - Must Link to: The Concept ([/learn/assessments/formative](#)).
 - Anchor Text: **"What is formative assessment?"**

^^anchor text can be present in the FAQ section

What should be our marketing-page/ home-page navigation?

Top Nav (primary) :

- PLANS - [/pricing/](#)
- FOR SCHOOLS & DISTRICTS - landing page [/home/schools-and-distict....](#)
- FOR EDUCATORS - landing page [/home/teachers...](#)
- INSTRUCTION & ASSESSMENT – [/learn/....](#) - all content pillars
- LIBRARY - [/resource-library/....](#) - all SEO programmatic ones
- AI CREATE - [/product/generators](#)
- RESOURCES –blogs, etc

Top Nav (Utility) :

- Get a Quote
- Enter Code
- Login / Sign up

More details on [navigation here](#)

Roadmap

Roadmap'26 :

- Q1 summarized plan [here](#)
- Detailed Monthly inputs and projections [here](#)
- Dashboard first [draft](#)

1. Demand inputs (external) :

- Identify "Topic Opportunities": "AEO Opportunity Score = AI Volume × Intent relevance × Brand fit". Focus on **Brand fit** and "**Task**"/ "**Transaction**" intent more
- Resp: Gaurangi
- Status :**
 - Sourcing info : data-for-seo, SEM Rush , FOMO, Airops - tool
 - 2 iterations done; not finalized. [link1](#), [link2](#)

2. Demand inputs (internal) :

- Identify "Internal positioning" topic clusters
- Resp: Chandan
- Need coordination with product/ PMM/ business to align on this.
- Status :**
 - Batch 1 → Assessments, Generators, Question-types, Lesson-plan (50 articles) - **WIP**
 - Batch 2 → AI literacy, CTE, Accommodations, Competitor comparison/ synergy

3. Set up understanding/observability of AEO :

- Understanding observability across this space
- Resp: Gaurangi
- Might need some engineering support for executing this (tracking from these external sites to the warehouse, etc)
- Status :**
 - Dashboard first [draft](#)
 - Covers topics, mentions → but there is much richer information available (citations, external sources/domains amplyfying these, etc)

4. Set up tighter content ops :

- From demand identification to shipping (creating pages) with guardrails
- Resp: Chandan
- Status :
 - [LLM evaluator](#) (trained on the first few articles) (synergy with teacher feedback)
 - SMEs/ Vetting - alignment & bandwidth discussion with UXR - [teacher feedback loop data](#) (already in progress, ~30 articles done)

5. SERP → AEO

- a. Taking the goodness of SEO and what topical authority is available to expand
- b. For ADP pages → pipeline generation for FAQs, topics, etc
- c. This has good potential (piggybanking on current SEO goodness) → Need engineering/design support (low level) to implement this
- d. Resp : Gaurangi
- e. **Status:**
 - i. Identification of nodes - WIP

6. Source Opportunities :

- a. Piggybanking on competitor who are associated with certain topic cluster
- b. Using conjunction “competitor ++” OR comparison “competitor VS” led strategies here. E.g.
 - i. Blooket + WG helps with fun and rigor to improve learning outcomes
 - ii. WG vs Edpuzzle for consolidation, etc
- c. **Status :**
 - i. Revamping existing pages (not updated, re-branding not handled) - **WIP**

– Beyond Q1 (what should we focus on)

7. Navigation fixes for the site and homepage:

- a. This helps in AI extraction: Details [here](#)

E.g. :

Home | Products | Solutions | Resources | About

^^Bad nav for AEO

Worksheets | Quizzes | Practice Tests | Concepts | Teachers

^^Better nav for AEO

8. Distribution / Cited sources increase :

- a. Off-site AEO → Wiki, Reddit, Newsletter (via lifecycle)
- b. Might need content snippet / extraction pipeline to be set on top of owned content
- c. Also need partnership and social platform ownership to

Learnings <> top AEO player

Nerdwallet

50-80k monthly mentions (sep to nov)

Best in educational discovered so far :

Quizlet

25-50k monthly mentions (sep to nov)

Quizizz

3-3.5k mentions/month

WG

1-1.7k mentions/ month

^^around 5k/month

Understanding Nerdwallet

1. A lot of topic <> 1 pagers covering all the what/ why/ where..etc questions in details
2. Has a hub and spoke model to all contents.
 - E.g.
 - "Credit card" is a single page section; which has a few hubs :
 - <https://www.nerdwallet.com/credit-cards/hubs/choosing-a-credit-card>
 - <https://www.nerdwallet.com/credit-cards/hubs/credit-card-basics>
 - And a few more more
 - Each of these has 2 sections (best and learn)
 - Best for stackranking and showcasing recommendation
 - <https://www.nerdwallet.com/credit-cards/best/no-credit>
 - <https://www.nerdwallet.com/credit-cards/best/rewards>
 - Learn for
 - <https://www.nerdwallet.com/credit-cards/learn/secured-credit-cards-vs-unsecured-difference>
 - <https://www.nerdwallet.com/credit-cards/learn/will-more-than-one-credit-card-help-my-credit-score>
 - Reviews for each
 - these are done by employees (editorial team)
 - <https://www.nerdwallet.com/credit-cards/reviews/chase-sapphire-preferred>
 -
3. Has navigation (home page navigation) structured exactly around the hub-spoke construct.

Suggestion for WG in this [file](#) and screenshot for 1 section below:

Top Nav (primary) :

- PLANS
- FOR SCHOOLS & DISTRICTS
- FOR EDUCATORS
- INSTRUCTION & ASSESSMENT
- LIBRARY
- AI CREATE
- RESOURCES

Top Nav (Utility) :

- Get a Quote
- Enter Code
- Login / Sign up

INSTRUCTION & ASSESSMENT

Purpose: Canonical answer hub for *how learning, assessment, and practice work*

NEW NAVIGATION SECTION

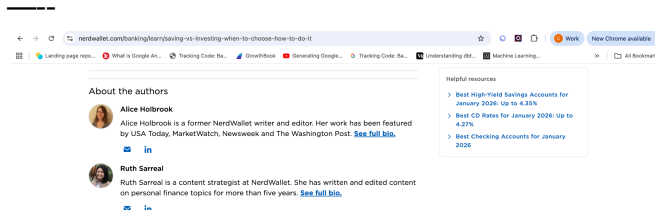

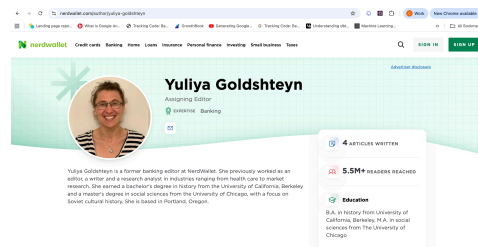

Sub-nav

- Instruction & Engagement
 - Teaching Strategies
 - Classroom Engagement Models
 - Resource Use by Context
- Formative Assessment
 - Checks for Understanding
 - Live Feedback
 - Classroom Signals
- Summative Assessment
 - Benchmarking
 - Standards Alignment
 - Aggregated Reporting
- Practice & Skill Mastery
 - Voyage Math
 - Skill Maps
 - Post-Assessment Learning Loops

*Align on what are hub-pages for us (sub-nav) and have learn/ compare types pages within each.

4. Have solved well for EEAT (Experience, Expertise, Authoritativeness, Trustworthiness)

- Author pages linked in each article
- Author external links (Linkedin, Social) at start/end of articles

5. Entity <> Attribution relation is solved well

Each rating is defined by a few attributes (signal that it's not unidimensional); aids in decision making

Overall institution rating

3.3

NerdWallet rating

The bottom line:
JPMorgan Chase is the largest bank in the country and offers a robust menu of services and products. It has more than 5,000 branches. The bank provides mortgages, auto loans and one of the broadest selections of credit cards in the industry. Chase ranked well in the 2024 J.D. Power U.S. Retail Banking Satisfaction Study.

Chase has a good basic checking account but its savings rates are low, and some fees are high.

Best for: Customers who want access to many branches, are not looking for the highest deposit rates and can keep a large enough balance to avoid a monthly fee.

Here's a look at how the cards stack up on their major features:

	Chase Sapphire Preferred® Card	Chase Sapphire Reserve®
Annual fee	\$95.	\$795.
Sign-up bonus	Earn 75,000 bonus points after you spend \$5,000 on purchases in the first 3 months from account opening.	Earn 125,000 bonus points after you spend \$6,000 on purchases in the first 3 months from account opening.
Rewards	• 5 points per \$1 spent on all travel purchased through Chase. • 3 points per \$1 spent on dining (including eligible delivery services and takeout). • 3 points per \$1 spent on select streaming services. • 3 points per \$1 spent on online grocery purchases (not including Target, Walmart and	• 8 points per \$1 spent on travel booked through Chase. • 4 points per \$1 spent on flights booked directly with airlines and stays booked directly with hotels. • 3 points per \$1 spent on dining.

6. Interlinking solved well

- All the articles (learn, reviews, hubs, best) have sections and interlinking pointing to each other relevantly
-

7. Transparency up-front :

✓ Edited by

[Kenley Young](#)

Many or all of the products on this page are from partners who compensate us when you click to or take an action on their website, but this does not influence our evaluations or ratings. Our opinions are our own.

My take on hub and sub-sections:

- The hub pages acts as anchor themes
- All relevant explaining things fits into “learn”
- All relationship/entity forms part of stack ranked/ best pages (helping the overall relationship across pages)

AEO Observability

AEO system

Rough framing

Topic → Answer Node → Trusted Source → Citation → Brand Recall

Principle : More topic associations >> to more citations (extractions from pages)** >> to more brand recall

**won't happen if content ops is not solved well (even if there is good associations)

**structured/ EAR/ EEAT principle led content

Metrics which are important (to understand progress) :

No	KPIs	Formula	Definition	Comments	
1	Topic Coverage %	$\frac{(\# \text{ Performing Topics})}{(\text{Performing} + \text{Missed Topics})}$	What % of category topics mention us in AI answers	*can have L0, L1 level definitions here (topics can be limiting to brand offerings, topics can be more extensive -- higher volume, lesser teacher presence - resource types, etc)	
2	Topic Conversion Rate	Topics moved from Missed → Mentioned / Quarter	How fast we turn "Missed" topics into "Mentioned."	*execution velocity	
3	Brand mentions	$\frac{\text{Mentions/ time window}}{\text{Mentions/topic}}$	Depth of brand in each topic & has AEO readiness around it	*Additional mentions that can be tracked Mentions/source Mentions over time ^^impressions equivalent for AEO More mentions in each topic → Depth More mentions across topics is breadth in coverage	
4	Extractability Score	Prompts per page		1 page --> 1 topic --> n prompts (high) --> good extractability 1 page --> many topic --> y prompts (low) --> low extractability	More inputs than outputs
5	Source Penetration	Source Penetration % = $\frac{\text{Domains mentioning us}}{\text{Total trusted domains}}$		This is slightly vague; needs a clear definition of - either a social hearing tool (which can track a few domains and check which KWs/topic presence is increasing or not) - OR check mentions and domains covered in unison and maximize this	More inputs than outputs

Green-highlighted ones will be the primary focus

Site nav + homepage nav

Wayground.com: Site navigation & Homepage navigation

1. Core AEO level Architecture: The Decision Framework

Choosing the right "root" for evergreen content is the most critical decision for the site's long-term authority. Below are the pros and cons of each primary URL structure considered.

The Hub Model (/hubs/) * not preferring

- **Verdict:** Architect's Choice
- **Pros:** * **Strategic Signal:** Tells search engines and AI that this is a "Central Node" for a cluster of related concepts.
 - **Scalability:** Allows the site to grow into non-reading content (videos, interactive tools) without breaking the mental model.
 - **AEO Synergy:** Perfect for "spoke-and-wheel" linking, helping AI engines map the relationship between topics.
- **Cons:** * **Tone:** Can feel slightly more technical or "corporate" than "Learn."

VS

The Educational Model (/learn/)

- **Verdict:** Teacher's Choice (Preferring)
- **Pros:** * **Brand Resonance:** Aligns with the "Classroom" mental model. Users feel they are entering a space for knowledge and guides.
 - **Semantic Clarity:** AI easily identifies this as educational definitions and documentation.
- **Cons:** * **Limitation:** It implies a reading-heavy experience. If Wayground adds many interactive generators or dashboards under this root, the "Learn" label may feel inconsistent.

Other choices (not considered in annexure)

2. Proposed Site Hierarchy

A-Level: Primary Navigation

Level	URL Root	Comments
Learn navigating into content/topic pillars	/learn/ OR /hubs/	Content Creators / AI Bots/ Content Pillars
Plans	/pricing/	Management / Decision Makers
For Educators	/platform/ OR /admin	Product / End-Users
Library	/resource-library/	Teachers (Worksheets/UGC). All programmatic SEO pages should be linked here
Marketing landing pages	/home/landing-pages	Having for not having a better placeholder (marketing campaigns/ traffic to these in distribution channels)

B-Level: Pillar Pages (The "Spokes")

Under the [/learn/](#) root, content should be grouped into specific clusters:

1. **Assessments Hub:** [/learn/assessments/](#)
2. **Instructional Strategy:** [/learn/instruction-strategy/](#)
3. **AI Literacy:** [/learn/ai-literacy/](#)
4. **Career-Technical Ed:** [/learn/career-technical-education/](#)

3. Technicalities to be handled :

1. **Depth:** No pillar page or article should be more than 3 folders deep (e.g., [wayground.com/learn/topic/article](#)).
2. **Access:** The **Assessments Hub** must be pinned in the site footer or the main "Resources" dropdown to ensure it is always accessible to crawlers.
3. **Interlinking:** Product pages ([/platform/](#)) should link to Hubs ([/learn/](#)) to provide educational context to features. How ?

a.

- The Concept (Hub): [abc.com/learn/assessments/formative](#)

- Must Link to: **The Tool** (/product/assessment-builder) and **The Material** (/resources/formative-worksheet).
- Anchor Text: "**Build your own**" or "**Download practice example.**"
- b.**
 - The Material (Resources): abc.com/resources/algebra-formative-worksheet
 - Must Link to: **The Concept** (/learn/assessments/formative).
 - Anchor Text: "**Learn why this works.**"
- c.**
 - The Tool (Product): abc.com/product/assessment-builder
 - Must Link to: The Concept (/learn/assessments/formative).
 - Anchor Text: "**What is formative assessment?**"

^^anchor text can be present in the FAQ section

4. Proposed Home page navigation and links

Top Nav (primary) :

- PLANS - /pricing/
- FOR SCHOOLS & DISTRICTS - landing page /home/....
- FOR EDUCATORS - landing page /home/.....
- INSTRUCTION & ASSESSMENT – /learn/.... - all content pillars
- LIBRARY - /resources/.... - all SEO programmatic ones
- AI CREATE - /product/generators
- RESOURCES –blogs, etc

Top Nav (Utility) :

- Get a Quote
- Enter Code
- Login / Sign up

More details on [navigation here](#)

Content pillar(s) Page structure/design

How to ensure Content-pillar(s) and respective AEO long-form content are structured correctly?

1. Improve page design → Readable and Extractable ; exit flows
2. Add contextual images (product offerings)
3. Interlinking
4. Proof/ authority → reviewed/published by
5. Recency → created and updated timestamp

What's the content pillar(s) URL structure?

- **/learn/**: This is the root level that helps AI bots understand - Long-form content is available here.
- **/learn/"topic-pillars"/**: Under the root, content should be grouped into specific clusters.
 - e.g. → **/learn/assessments/** ; **/learn/instruction-strategy/**; **/learn/ai-literacy/**
- **/learn/"topic-pillars"/"article-name"**: Specific articles for each cluster is present here
 - E.g → <https://wayground.com/learn/lesson-plan/writing-objectives-for-lesson-plans-made-simple?lng=en>

Page design

1. **/learn/** → **Not required** if objective is "learn + topic-pillar"

^^ An interesting way to bucketize here could be ICP backwards (learn as an Admin, as a Teacher...and can have those nuances in each section or global filter) → not immediate focus

2. **/learn/"topic-pillar"**

- a. "What this page will do" → not about the topic, but this helps in understanding the topic (clear identification of objective) (not a topic page ...but a learning page)
 - i. Insp → "NerdWallet's writers offer insights on banking. Get clear answers to your questions and learn the fundamentals of banking."
- b. Types section → "can link to product or hub/learn sections"
 - i. If question types → each question types page (hub..)
 - ii. if assessments → individual assessment types or assessment comparison pages...(articles basically)
- c. Best/Popular articles
- d. Latest/Trending articles
- e. Recommendations section → to go to adjacent pillars
- f. Tooling/ product section
 - i. For question types → quiz generator
 - ii. For assessments → quiz generator, assessment resource libraries
- g. Actions section (signup/ quote, etc)
- h. Search → not immediate (when content pool is high)

3. **/learn/"topic-pillar" /"article."**

- a. Breadcrumbs for easy navigation and AI understanding
- b. Published & Reviewed by placeholders
- c. Created & Updated at placeholders
- d. Sections (compartmentalized – Steps, Key points, Differences, etc..) → These can feed into every article wherever relevant.

Above inspiration from [here](#)

AEO <> strategy (old)

AEO Content Strategy for K-12 Teachers & Admins

1. Targeted Ideal Customer Profiles (ICP)

- US K-12 Teachers
- US K-12 School/District Administrators

2. Content Strategy

2a. Question-based content for the ICPs

Objective: The goal is to address common problems that teachers and administrators face, providing practical and insightful content that helps solve real-world challenges in the classroom and district.

For US K-12 Teachers

Topics focused on instructional planning, technology integration, assessments, student support, and professional development. Example **questions**:

1. **Instructional Planning & Classroom Management**
What classroom management techniques work best for middle school?
2. **Technology Integration & EdTech Choices**
Which EdTech tools can help me with quick formative assessments?
3. **Assessment, Data, and Student Growth**
How do I use student data to inform my teaching?
4. **Student Support & Equity**
How do I support students with special needs?
5. **Professional Development & Teacher Well-being**
Where can I get free PD for teaching with technology?

For US K-12 School/District Administrators

Focus on topics related to technology, policy, funding, and staff development. Example **questions**:

1. **Technology Implementation & Operations**
How do I track usage and effectiveness of technology with teachers?
2. **Policy, Compliance & School Management**
What are our requirements for FERPA/student privacy?
3. **Funding & Resource Allocation**
How can I apply for grants or funding for technology upgrades?
4. **Family/Community Engagement & Communication**
What's the best way to communicate student achievement to parents?
5. **Staff Development & Support**
How do I plan PD for teachers across schools?

2b. Topic/Practice Problem-Based content for ICPs

Objective: Create a combination of text, practice problems, and videos that comprehensively teach various concepts.

Example Topics for Practice Problems and Lessons:

1. Square Root Functions
2. Equations of a Line
3. Shapes
4. Absolute Value Functions
5. Circles

3. Team Structure and Content Creation Process

Objective: Build a team capable of consistently producing high-quality content for educators and school administrators.

Capability 1 : Discovering “Question-based” and “Topics” to be worked around

- Topics are demand backwards (what’s most searched in AI engines)
- Question-based are business ICP synergy backwards (ICPs key problems - e.g. empathy maps)

Who? : Use Graphite Team & Fomo.ai: Leverage these agencies/ tools to provide insights into what to write based on opportunity sizing. (Might need timely recruiting and workshops/ user-calls to figure out details)

Organic vs. Inorganic fit (synergy with platform vs non-synergy) :

- **Organic Fit:** Content solving teaching and learning use cases.
- **Inorganic Fit:** Content focused on planning-related use cases.

Capability 2 : Structure, hierarchy of pages to be developed & connectivity around it. Owns content generation, vetting and launch

Who? : In-house/Consultant writer(s): 2 writers with weekly content goals (preferably former teachers or press writers). Also part of the recruitment, vetting and stamping process.

Types of Content:

- Articles written from scratch
- Articles using Fomo.ai for initial drafts and then editing them
- Produce bite-sized videos for brand awareness, designed to be engaging and informative

Tools/ Systems :

- Build an AI system that can generate content, images, and videos based on an input topic. Content will be vetted by subject matter experts
- [Fomo.ai](#) or similar which automates the above
- Video generation tool

Capability 3 : Recruitment, Vetting and stamping (to ensure trust and authoritativeness)

Google's double-EAT" (Experience, Expertise, Authoritativeness, Trustworthiness) paradigm

Who? : Teachers or SME (subject matter experts) recruited on some incentive schemes to help in co authoring or helping in vetting and stamping their name-value to contents

Capability 4 : Owning distribution across product and other platform

- **Partner Blog Posts:** Publish articles on reputable sites like Edutopia or similar platforms.
- **Press Releases:** Announce partnerships and major feature launches.
- **Product (landing pages) :** SEO pages
- **Social platforms :** Snippets of content tailored to each platform from primary content pages

Product team responsibilities:

- Any new feature should be accompanied by content that explains what the feature solves, how it works, and a video explaining its use.
- The Product Team can work with the current communications team and help center article writers to produce this content.

4. What does success/MVP look like ?

- How many topics? Which ones ?
- Minimum/ Best estimations of output ?
- What's the major hypothesis ? (quality or anything else) ; how to measure ?
- What's the team and timeline ?

1. Capability / near term/ long term - video capability needed ??
2. Weekly plan - which KWs every week (project plan - detailed)
3. Graphite – topic plan
 - a. Process for identification (current and evolving)
4. Project - process for churning out content

Team (old - not refer)

Objective:

Increase traffic from LLMs by creating and optimizing content for answer engines.

Capabilities for Answer Engine Optimization (AEO):

Capability 1: Identifying Content Opportunities

- **Key Actions:**
 1. Identify high-volume question clusters searched by teachers that align with product offerings and prioritize them.
 2. Identify relevant question clusters searched by administrators that our product addresses for schools or districts.
 3. Identify high-traffic topic clusters relevant to both teachers and students.
- **Approach:**
 1. **Short-term:** Leverage Graphite to find question and topic clusters.
 2. Rank clusters by priority and volume.
 3. **Long-term:** Build the capability to identify themes using tools like Semrush, Ahrefs, Writesonic, or similar platforms.
- **Team:** Graphite, Chandan, Shamil

Capability 2: Content Creation for Identified Question Clusters

- **Key Actions:**
 1. Develop a content brief outlining how to structure content for targeted question clusters.
 2. **Approach for Content Creation:**
 - **Approach 1:** Content writers create content based on the provided structure.
 - **Approach 2:** Use tools like FOMO to generate content, which is then vetted by a content writer.
- **Process:**
 1. Content writers prioritize the structure outlined in the content brief.
 2. Once the content structure is ready, pass it to Webflow developers to start building the page.

3. After the content is fully developed, add it to the page.
- **Team:** 2 Content Experts (near-term), 1 Subject Matter Expert (for vetting topic-based pages), Guest Teachers & Admin Writers (long-term muscle development).

Capability 3: Content Publishing

- **Key Actions:**
 1. Finalize URL structure for the content (e.g., wayground.com/blog).
 2. Create a page template based on the content brief.
 3. Add the content to the template and publish it.
- **Process:**
 1. Once the content brief is ready, use it to build the page template.
 2. After content completion, add it to the template.
 3. Implement on-page SEO and AEO elements.
 4. Collaborate with PM to ensure the page passes the quality assurance (QA) process before it's published.
- **Team:** 1 Webflow Developer (or Flowtrix bandwidth).

Capability 4: AEO/SEO Quality Assurance

- **Key Actions:**
 1. Check for on-page SEO elements:
 - Page load speed.
 - Title, meta description, heading structure, and FAQs.
 - Ensure the page is indexable and crawlable.
- **Process:**
 1. Use tools like Screaming Frog to perform on-page SEO checks.
 2. Work with Webflow developers to resolve any issues identified in the QA process.
- **Team:** PM, Webflow developer.

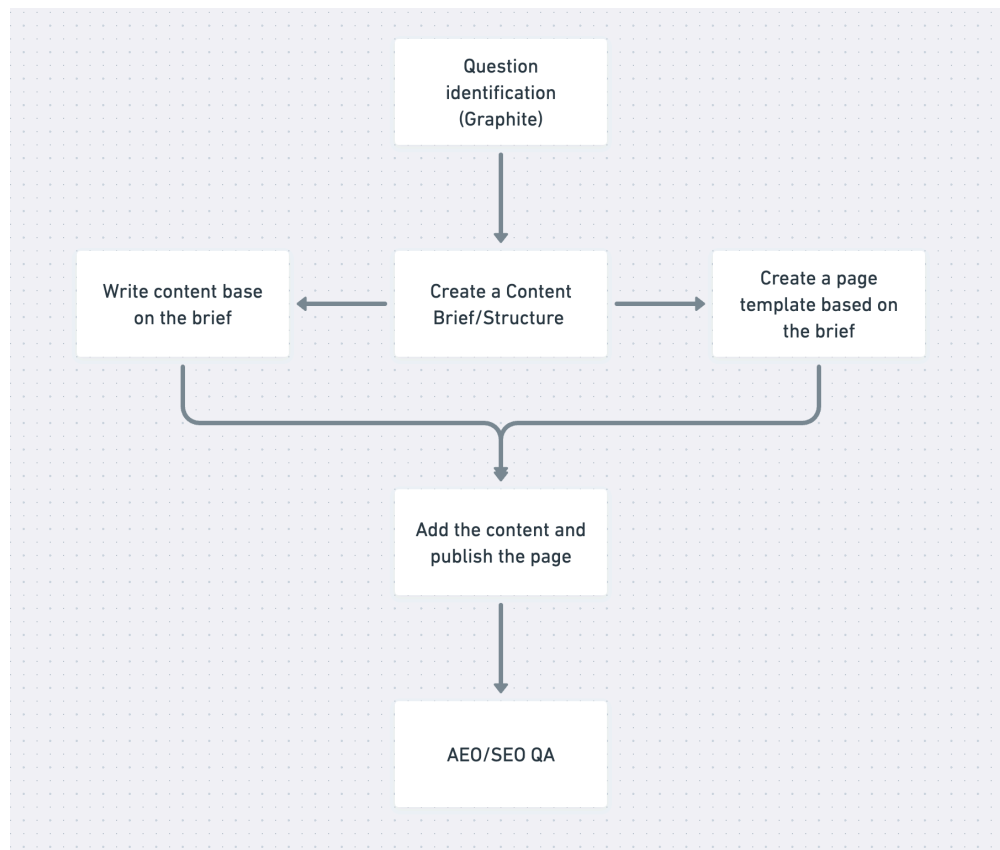

Capability 5 (Long-term): AI-Driven Content Generation for Topic Pages

- **Key Actions:**

1. Select a topic and add it to the AI content generation pipeline.
2. Once initialized, fetch the top 3 Google results for that topic.
3. Scrape the content from these top 3 URLs.
4. Create a content brief or structure based on these results, ensuring the content is aligned with what works.
5. Use AI to generate content based on the brief, trained in the content writing style.
6. Develop an AI agent to select the appropriate images for the content.
7. Use AI to create both short and long-form video content.
8. Pass the generated content to subject matter experts for evaluation.

- **Team:** PM, 2 Engineers, 1 Designer (for creating templates).

Near-term process workflow

Immediate actions

1. Prioritise topics with Graphite
2. Find one content expert to write and vet content
3. Find bandwidth from Flowtrix to work on the template

Navigation (suggestion) (old)

URL Root: Create a dedicated root for evergreen content (e.g., [/learn/](#), [/hub/](#), [/academy/](#), or [/topics/](#)).

Depth: Ensure no Pillar page is more than 3 folders deep (e.g., [Domain](#) > [Learn](#) > [Topic](#) > [Article](#)).

Navigation: Ensure the "Assessments" hub is accessible from the main site footer or "Resources" menu.

Rank	URL Structure	Verdict	The Signal to AI
1 (Tie)	abc.com/hubs/assessments	Architect's Choice	Signals Structure & Interconnection . Tells the AI, "This is the central node for a cluster of related content."
1 (Tie)	abc.com/learn/assessments	Teacher's Choice	Signals Educational Intent . Tells the AI, "This is knowledge, definitions, and guides."
2	abc.com/resources/assessments	Librarian's Choice	Signals Assets & Files . Useful, but AI may confuse it with downloadable tools (PDFs, templates).

3	abc.com/home/assessments	Bad Practice	Signals Noise . Adds unnecessary depth and no semantic meaning.
---	--	---------------------	--

. [abc.com/hubs/assessments](#) (The Strategic Powerhouse)

Why it works: The term "Hub" has specific meaning in the SEO/AEO world (popularized by HubSpot). It explicitly denotes a **Topic Cluster** strategy.

- **The Signal:** It tells the crawler, *"This page is not just an article; it is a table of contents for a wider ecosystem."*
- **Best Use Case:** If your "Assessments" page is a mix of a long guide *plus* links to 10 other related sub-articles. It implies a "spoke-and-wheel" architecture which AEO engines love because it helps them map relationships between concepts.

2. The Nuanced Battle: [/hubs/](#) vs. [/learn/](#)

They are both excellent, but they frame the user's mindset differently.

- **Use [/learn/](#) if:** Your content is primarily **long-form reading**.
 - *Mental Model:* A Classroom. You go there to sit and read a textbook.
 - *Example:* [.../learn/assessments/comprehensive-guide](#)
- **Use [/hubs/](#) if:** Your content is a **directory or navigation center**.
 - *Mental Model:* An Airport Terminal. You go there to get to other destinations (sub-pages).
 - *Example:* [.../hubs/assessments](#) (which links to "Tools", "Guides", "Templates", and "News").

3. Evidence & Sources

- **HubSpot:** They coined the term "Content Hub" and "Topic Cluster." Their own site architecture relies heavily on distinct sections for Blog vs. Knowledge Base vs. Academy ([/academy/](#), [/blog/](#)). They use specific directories to separate "streams" of content.
- **Google Search Central:** Google explicitly advises using "logic-based" directory structures. If you have a massive amount of content on one topic, grouping it under [/hubs/](#) creates a logical "chunk" that is easier for their bots to parse than a flat [/blog/](#) list.

Recommendation

If you plan to have **multiple** pillar pages (e.g., one for "Assessments," one for "Curriculum," one for "Classroom Mgmt"), **/hubs/** is the superior structural choice.

It creates a very clean, scalable architecture:

- [abc.com/hubs/assessments](#)
- [abc.com/hubs/curriculum](#)
- [abc.com/hubs/classroom-management](#)

This is cleaner than **/learn/** if you eventually want to offer things that *aren't* strictly reading (like video courses or interactive tools) under the same roof.

Proposed structure (with interlinking across wherever relevant)

A level

- **learn or hub** (content pillars sit here) - mostly answers what? how? Questions

E.g. wayground.com/learn/

- **buy or plan** (plans or pricing here)

E.g. wayground.com/pricing/

- **product** (product/user experience URLs) - can link to hub level based on synergy

E.g. wayground.com/platform/

- **resources** (content) - actual resources used by teachers to engage with students ; e.g. algebra grade 9 worksheet (all programmatic UGC SEO fits here)

E.g. wayground.com/resources/

- **blog** - not restrictive to hubs strategy but can link to hubs based on synergies

- **others (as relevant)**

B level (nested from A)

- learn

a. Assessment - e.g.

wayground.com/learn/assessments/formative-assessment-types-explained-and-how-to-use-them

 [20. Formative Assessment Types Explained And How to Use Them](#)

b. Questiontypes

c. Generators

d. **more in future** -- instruction strategy , differentiations/accommodations, Ai-literacy, career-technical-education

Annexure

What are the winning pillars or must have(s) here ?

Sources

- Graphite recommendation
- [Fomo.ai](#)
- www.growthunhinged.com

Owned content

Outreach (is this important - how much ??) - some other sites mentioning us

UGC, Media footprint - should focus on this from an input/output POV depending on ICPs primary discovery channels. Also must have IMO.

- Social platforms (Insta, Tiktok, Twitter, Reddit)
- Video platforms (

Consumer	Question they ask
LLMs / AI search (SGE, Perplexity, ChatGPT)	"Can I extract a clean, confident answer?"
Search engines	"Is this the best structured authority?"
Humans	"Did this solve my question immediately?"

ALL are must have(s); anything fails AEO fails

The Library Model (/resources/)

- **Verdict:** Librarian's Choice (Secondary)
- **Pros:** * **Resource Focus:** Excellent for downloadable assets like worksheets (UGC) or PDFs.
- **Cons:** * **AI Confusion:** AI crawlers often associate "Resources" with "files" rather than "authoritative knowledge," potentially diluting the power of evergreen pillar articles.

The Flat Model (/home/ or /blog/)

- **Verdict:** Bad Practice
- **Pros:** None.

- **Cons:**
 - * **Signal Noise:** Adds unnecessary URL depth.
 - **Lack of Meaning:** Provides no semantic context to the AI about the relationship between pages.

<https://www.airops.com/report/the-2026-state-of-ai-search>

AI search reshaped how people discover and evaluate brands in 2025. Visibility now depends on freshness, off-site credibility, content clarity and how clearly content can be interpreted inside answers—not just how it ranks.

- **Brand visibility is in a constant state of fluctuation.** Only 30% of brands stay visible from one answer to the next, and just 20% remain present across five consecutive runs.
- **Fresh, structured content wins.** Pages not updated quarterly are 3× more likely to lose citations. Sequential headings and rich schema correlate with 2.8× higher citation rates.
- **Mentions and citations together create stability.** Brands earning both signals show 40% higher likelihood of reappearing across answers, but only 28% of answers include brands with dual visibility.
- **Credibility is earned off-site.** About 48% of citations come from community platforms like Reddit and YouTube, and 85% of brand mentions originate from third-party pages rather than owned domains.
- **AIO citations bypass rankings.** Roughly 60% of AI Overview citations come from URLs not ranking in the top 20 organic results.

Across millions of datapoints, one message is clear: AI search rewards brands that keep content up-to-date, structured, and supported by strong off-site validation.

- FOMO → Competitor work, few internal position backwards (teacher, admin)
- Demand engine → Long form content (Internal positioning ..die down)
 - **Volumetric** → SERP to AEO (...); external → $(AI\ volume * Intent * Brand\ relevancy)$
 - Worksheet experiment → topic association
 - **New themes** → (AI governance among students...) ~ mechanics?
- Off-site AEO → distribution
- Content refresh → how?
- Structure → site (front-loaded)

Scenario A (classic SEO win)

- 10 dofollow links
- All from "SEO blogs"
- All keyword-optimized

Scenario B (AI visibility win)

- Teacher blogs (nofollow)
- EdTech reviews (image + logo)
- Reddit threads (nofollow mentions)
- PDFs shared by schools
- Medium posts with screenshots
- YouTube descriptions

AI conclusion:

"This tool is commonly referenced in real teaching contexts."

AI prefers **Scenario B**.

^^AEO can aid in sales

Q - Question-Answer Expansion

- **Action:** Add detailed FAQ sections that anticipate user intent.
- **Rationale:** Generative engines such as Perplexity or Gemini favor content that reflects the natural dialogue of a user's prompt. Expanding "What is X?" into "How does X work for Y?" increases coverage.

A - Authority Building

- **Action:** Include verifiable data, expert quotes, and external links.
- **Rationale:** AI models are trained to avoid "hallucinations." They prefer citing sources that provide corroborative evidence, which significantly raises the inclusion rate in the final summary.

P - Proof (E-E-A-T Signals)

- **Action:** Use specific "Experience" markers like "In our testing..." or "We found that..."
- **Rationale:** Research shows that adding "Expert Quoting" and "Statistic Addition" are the most effective individual tactics for improving visibility in generative responses.

E - Expansion (Semantic)

- **Action:** Use Latent Semantic Indexing (LSI) and related concepts to provide a holistic view of a topic.
- **Rationale:** LLMs look for topical depth. A page that covers the "neighborhood" of a keyword is more likely to be selected as a "comprehensive" source.

D - Decision Structure

- **Action:** Use clear hierarchies—Comparison Tables, Pros/Cons lists, and Decision Trees.

- **Rationale:** LLMs are excellent at summarization. If data is pre-structured into a "Decision Matrix," the AI can lift it directly into the chat interface with minimal processing.

S - Statistics & Citations

- **Action:** Hard-code numerical data and cite primary sources.
- **Rationale:** In the original GEO study, simply adding statistics boosted the probability of being cited by nearly 40%. Numerical facts act as "anchors" for AI reasoning.
